

# Shared Principles for AI in Science Education

**Workshop Takeaway:** Capture group ideas and take them back to your school.

## Starter Principles:

1. Teachers remain in control – AI supports but does not replace expertise.
2. Content must be vetted and aligned to NGSS, state, and AP standards.
3. Equity is non-negotiable – scaffolds support multilingual and diverse learners.
4. Transparency builds trust – students and families know how AI is used.
5. Collaboration strengthens practice – PLCs ensure responsible, effective use.

## Our Shared Principles:
